1 Introduction

1.1 Document Purpose

This Software Requirements Specification (SRS) document describes the requirements for the Digital Complaint and Grievance System. It defines the functional and non-functional requirements of the system and provides a detailed description of the system's behavior, constraints, and interfaces.
The purpose of this document is to provide a clear reference for developers, testers, and stakeholders to understand the expected functionality and performance of the system.

1.2 Product Scope

The Digital Complaint and Grievance System is a web-based platform that allows users to submit complaints digitally and track their status. The system provides administrators with tools to manage complaints, update their progress, and resolve issues efficiently.
The system aims to improve transparency, communication, and efficiency in complaint handling by providing a centralized platform for complaint management.

1.3 Intended Audience and Document Overview

This document is intended for:

- *Developers implementing the system*
- *Software engineering instructors evaluating the project*
- *Testers responsible for validating system behavior*
- *Team members involved in the development process*

The document begins with an overview of the system and then provides detailed functional and non-functional requirements along with interface descriptions and system behavior.

1.4 Definitions, Acronyms and Abbreviations

Term	***Meaning***
SRS	*Software Requirements Specification*
UI	*User Interface*
API	*Application Programming Interface*
Admin	*Administrator who manages complaints*
User	*Person submitting complaints*

1.5 Document Conventions

This document follows the IEEE Software Requirements Specification format.
Section headings are numbered to maintain structure and traceability. Functional requirements are labeled with identifiers (FR-1, FR-2, etc.) and non-functional requirements are labeled (NFR-1, NFR-2, etc.).

1.6 References and Acknowledgments

1.6.1 References

1. *IEEE Recommended Practice for Software Requirements Specifications (IEEE 830).*
2. *Software Engineering – Ian Sommerville.*
3. *UML documentation and tutorials.*
4. *Course materials provided by the faculty.*
5. *Online resources used for understanding system requirements and UML diagrams.*

1.6.2 Acknowledgments

We would like to express our sincere gratitude to our faculty guide for providing valuable guidance and support throughout the development of this Software Requirements Specification (SRS) document. Their suggestions and feedback helped us understand the concepts of software engineering and requirement analysis more effectively.

We also thank our department and institution for providing the necessary resources and environment to complete this work successfully. Finally, we appreciate the efforts of all team members for their cooperation and contribution to this project.

2 Overall Description

2.1 Product Overview

The Digital Complaint and Grievance System is designed as a web-based application using a three-tier architecture.
Components include:
Frontend – React User Interface
Backend – Spring Boot Application Server
Database- MySQL Database System
Users interact with the system through a web interface, while administrators manage complaints using an administrative dashboard.

2.2 Product Functionality

Major functions of the system include:

- *User registration*
- *User authentication*
- *Complaint submission*
- *Complaint tracking*
- *Administrator complaint management*
- *Complaint status updates*
- *Complaint history viewing*

2.3 Design and Implementation Constraints

The system must use the following technologies:
Frontend: React
Backend: Spring Boot
Database: MySQL
The application must be accessible through modern web browsers and must follow basic web security practices.

2.4 Assumptions and Dependencies

Assumptions:

- *Users have internet access.*
- *The development environment supports Java and Spring Boot.*
- *The database server will be available during system operation.*

Dependencies:

- *MySQL database availability*
- *Backend API availability for frontend communication*
- *Web browser compatibility*

3 Specific Requirements

3.1 External Interface Requirements

3.1.1 User Interfaces

The system will provide web-based user interfaces for both users and administrators.
User Interface pages include:

- *User registration page*
- *User login page*
- *Complaint submission form*
- *Complaint tracking page*
- *Administrator dashboard*

The user interface will be implemented using React.

3.1.2 Hardware Interfaces

The system will operate on standard computing devices such as laptops, desktops, and mobile devices with internet access.
No specialized hardware interfaces are required.

3.1.3 Software Interfaces

The system interacts with:

- *MySQL database for storing complaint information*
- *Backend REST APIs developed using Spring Boot*

3.2 Functional Requirements

Functional requirements capture the intended behavior of the system. This behavior may be expressed as services, tasks or functions the system is required to perform. This section is the direct continuation of section 2.2 where you have specified the general functional requirements. Here, you should list in detail the different product functions.

3.2.1 F1: User Registration

The system shall allow new users to register by providing required details such as name, email address, and password. The system shall validate the input and store the user information securely in the database.

3.2.2 F2: User Login

The system shall allow registered users to log in using their credentials. The system shall authenticate the credentials before granting access to the system.

3.2.3 F3: Complaint Submission

The system shall allow users to submit complaints through an online complaint form. The complaint details shall be recorded and stored in the system database.

3.2.4 F4: Upload Supporting Documents

The system shall allow users to upload supporting files or documents when submitting a complaint.

3.2.5 F5: Complaint Data Storage

The system shall store complaint information securely in the database and maintain records of submitted complaints.

3.2.6 F6: Administrator Login

The system shall allow administrators to log in securely to access administrative functions.

3.2.7 F7: View Complaints

The system shall allow administrators to view all submitted complaints through the administrative dashboard.

3.2.8 F8: Filter Complaints

The system shall allow administrators to filter complaints based on their status such as Pending, In Progress, or Resolved.

3.2.9 F9: Update Complaint Status

The system shall allow administrators to update the status of complaints

3.2.10 F10: Respond to Complaints

The system shall allow administrators to respond to complaints and provide updates to users.

3.2.11 F11: Track Complaint Status

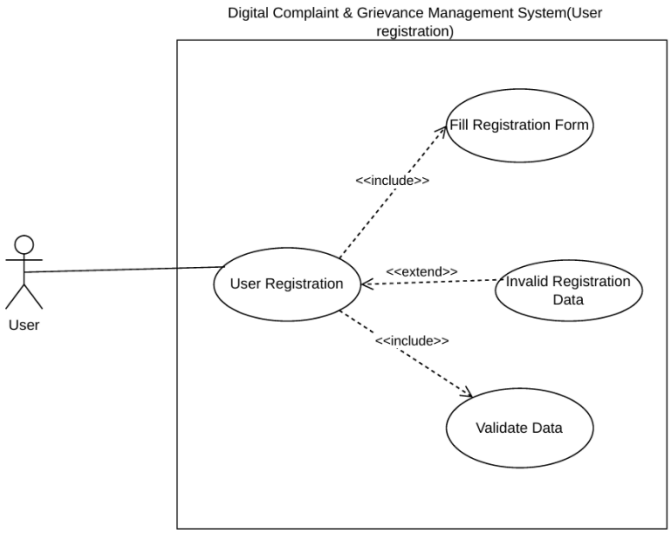
The system shall allow users to track the status of their submitted complaints.

3.2.12 F12: View Complaint History

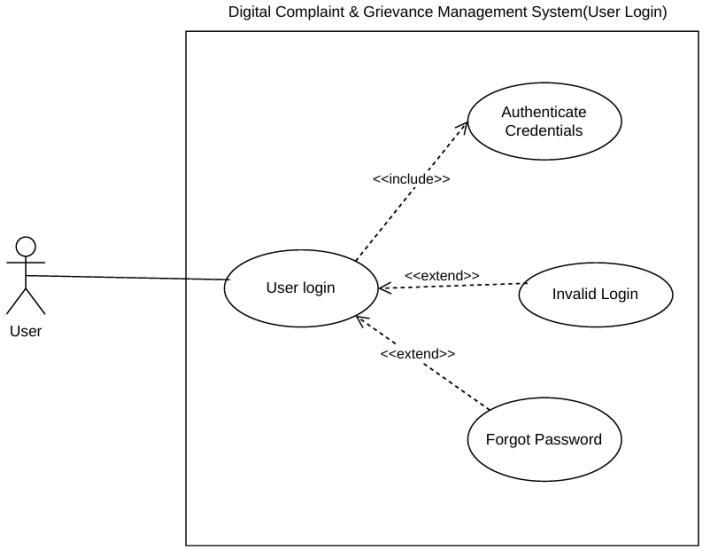
The system shall allow users to view the history of complaints they have submitted.

3.3 Use Case Model

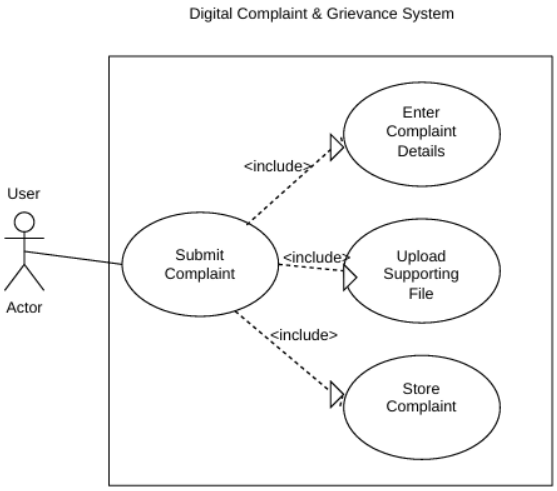
U1: User registration



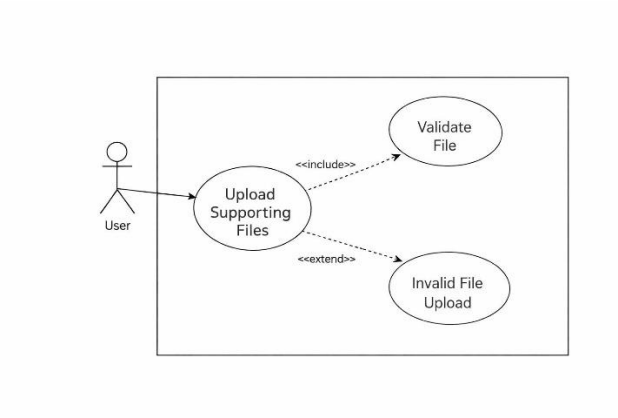
U2: User login



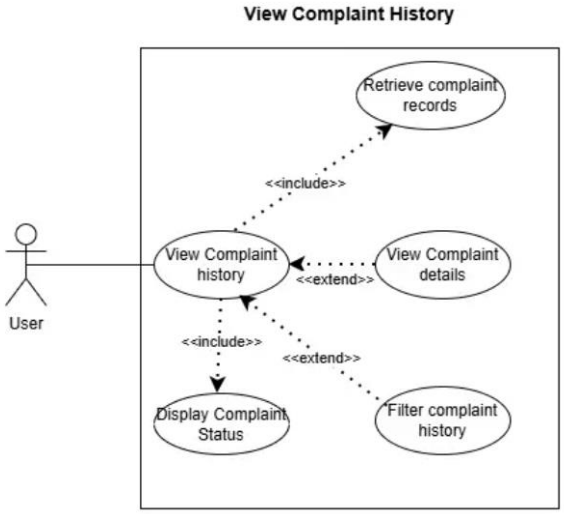
U3: Submit Complaint



U4: Upload Supporting Files

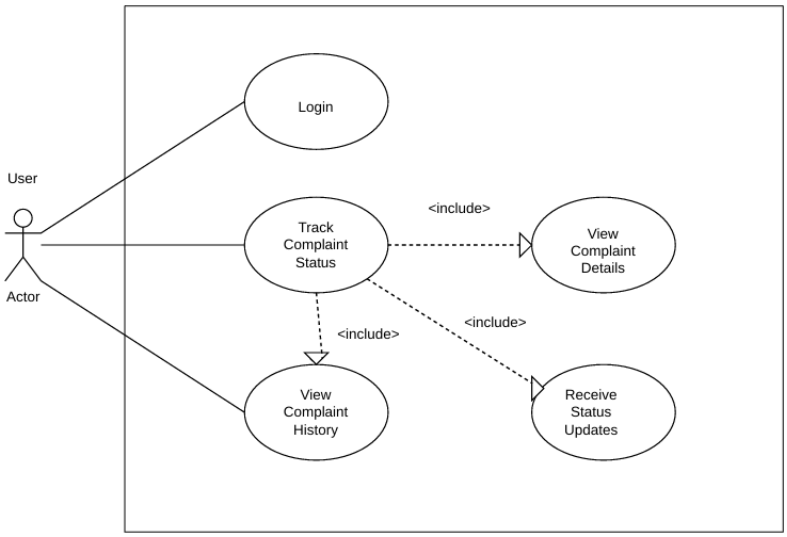


U5: View Complaint History



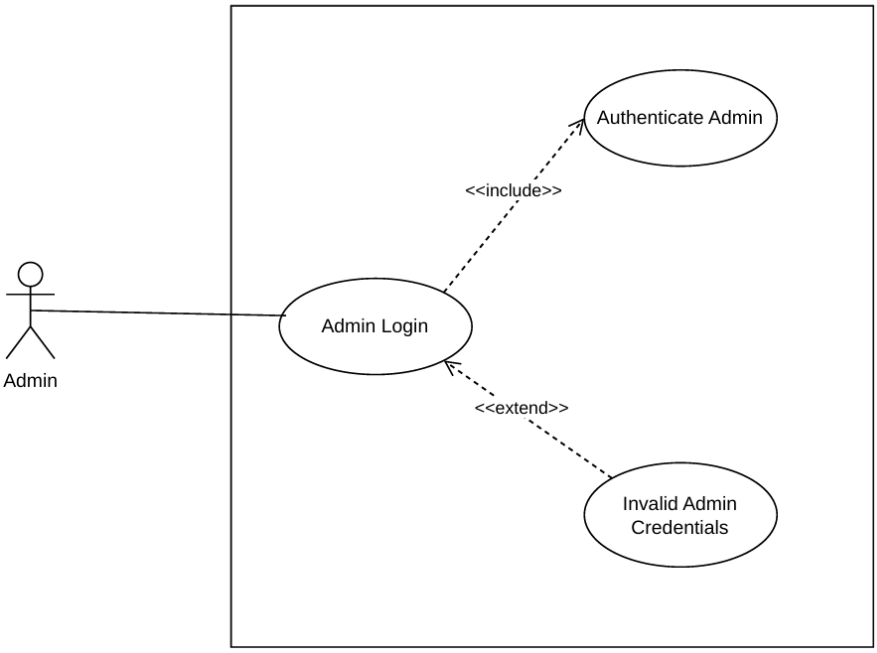
U6: Track Complaint Status

Digital Complaint and Grievance System

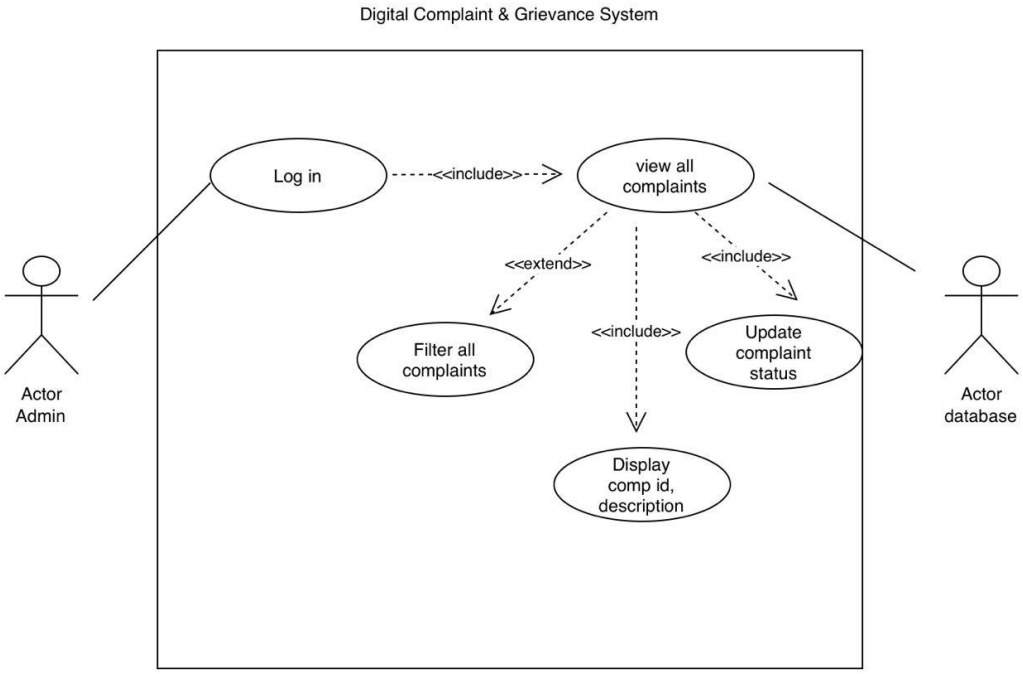


U7: Admin Login

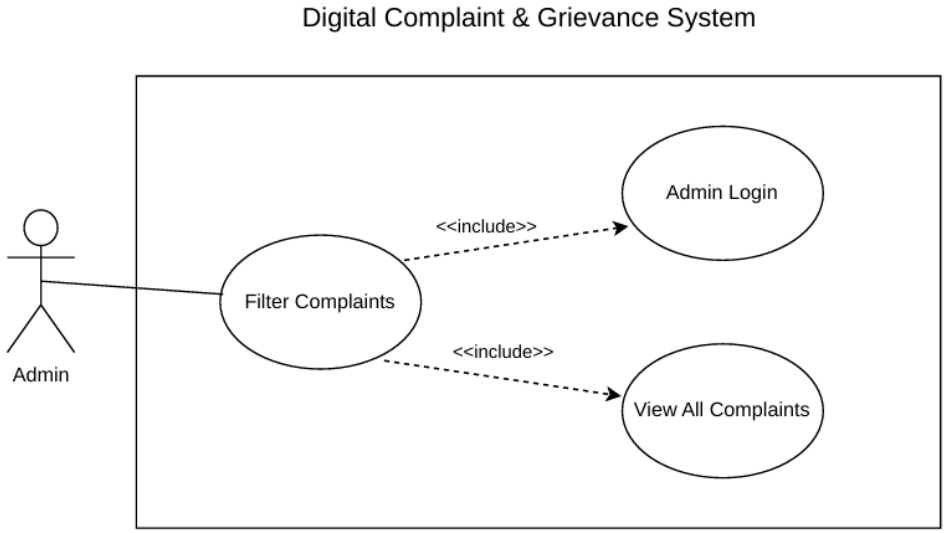
Digital Complaint & Grievance Management System(Admin Login)



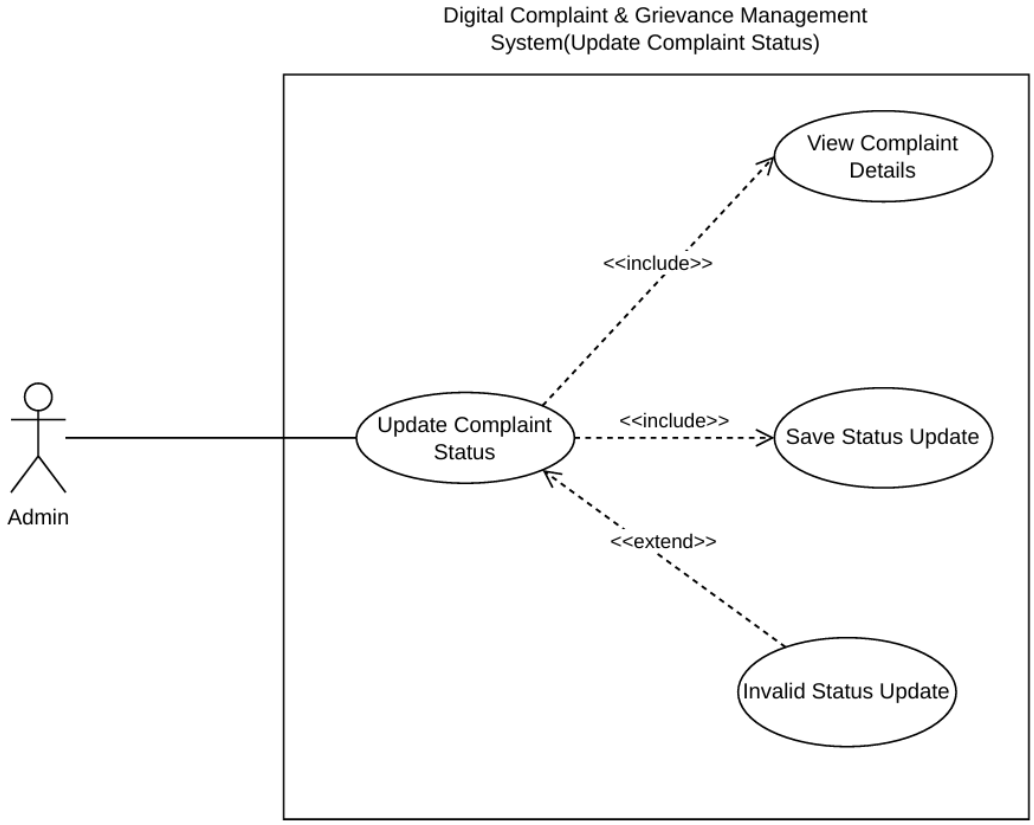
U8: VIEW ALL COMPLAINT



U9: FILTER COMPLAINTS



U10 : Update Complaint Status



3.3.1 Use Case #1

U1: User Registration

Author: S.Vaishnavi Reddy

Purpose: To allow a new user (citizen) to create an account in the Digital Complaint & Grievance Management System so they can submit complaints and track their grievance status.

Requirements Traceability:

● The system shall allow new users to register.

● The system shall validate user input during registration.

● The system shall store user details securely in the database.

Priority: High

Preconditions:

- The user must have access to the system registration page.
- The user must not already have a registered account.

Postconditions:

- A new user account is created successfully.
- The user information is stored in the system database.
- The user can log into the system using the registered credentials.

Actors: User (Citizen)

Extends: Invalid Registration Data

Flow of Events

1.Basic Flow

- The user opens the registration page.
- The system displays the registration form.
- The user fills in required details (name, email, password, phone number, etc.).
- The user submits the registration form.
- The system validates the entered data.
- The system creates a new user account.
- The system confirms successful registration.

2.Alternative Flow

- If the user enters an email that already exists, the system asks the user to enter a different email.

3.Exceptions

- Missing required fields in the form.
- Invalid email format.
- Weak password that does not meet system requirements.

Includes (other use case IDs):

- Fill Registration Form
- Validate Data

Notes / Issues:

● Email verification or OTP-based authentication may be implemented in future versions for better security.

3.3.2 Use Case #2

U2: User Login

Author: Hanshika Ravipati

Purpose: To allow registered users to securely access the Digital Complaint & Grievance Management System using their login credentials so they can submit complaints and track grievance status.

Requirements Traceability:

- The system shall allow registered users to log into the system.
- The system shall authenticate user credentials before granting access.
- The system shall deny access if credentials are invalid.

Priority: High

Preconditions:

- The user must already have a registered account.
- The system login page must be accessible.

Postconditions:

- The user is successfully logged into the system dashboard.
- The user can access complaint-related services.

Actors: User (Citizen)

Extends:

- Invalid Login
- Forgot Password

Flow of Events

1. Basic Flow

- The user opens the login page.
- The system displays the login form.
- The user enters username/email and password.
- The user clicks the login button.
- The system authenticates the entered credentials.
- If the credentials are valid, the system grants access to the user dashboard.

2. Alternative Flow

- If the user selects Forgot Password, the system allows the user to reset their password.

3. Exceptions

- Incorrect username or password entered.
- User account does not exist.
- System temporarily unavailable.

Includes (other use case IDs): Authenticate Credentials

Notes / Issues: Multi-factor authentication can be added in future versions for enhanced security.

3.3.3 Use Case #3

U3: Submit Complaint

Author: P. Indira Sneha

Purpose: The purpose of this use case is to allow a registered user to submit a complaint through the Digital Complaint and Grievance System so that the issue can be recorded and reviewed by the administrator.

Requirements Traceability:

- F3 – Submit Complaint
- F4 – Upload Supporting Files
- F5 – Store Complaint Information

Priority: High

Preconditions:

- The user must be registered in the system.

- The user must be logged into the system.
- The system must be accessible through a web browser.

Postconditions:

- The complaint details are successfully stored in the database.
- A unique complaint ID is generated.
- The complaint becomes available for administrators to review.

Actors: User

Flow of Events

1. **Basic Flow**

- The user logs into the system.
- The user navigates to the complaint submission page.
- The system displays the complaint submission form.
- The user enters complaint details such as title and description.
- The user optionally uploads supporting files.
- The user submits the complaint form.
- The system validates the entered information.
- The system stores the complaint information in the database.
- The system confirms that the complaint has been successfully submitted.

2. **Alternative Flow**

AF1 – Optional File Upload

- The user chooses to upload a supporting document.
- The system verifies the file format and size.
- The system attaches the file to the complaint record.

3. **Exceptions**

E1 – Missing Required Information

- If the user submits the form with missing required fields, the system displays an error message.
- The system prompts the user to complete the required fields.

E2 – File Upload Error

- If the uploaded file format is unsupported or exceeds the allowed size, the system rejects the file.
- The user is prompted to upload a valid file. Incorrect username or password entered.

Includes (other use case IDs):

- U4 – Upload Supporting Files
- U5 – Store Complaint Information

Notes / Issues:

- The system should limit the size and format of uploaded files.
- Complaint submission should be completed within a reasonable response time to ensure good user experience.

3.3.4 Use Case #4

U4: Upload Supporting Files

Author

Abhiram Reddy (SE23UCSE060)

Purpose

The purpose of this use case is to allow users to upload supporting files such as screenshots, documents, or images when submitting a complaint in the Digital Complaint and Grievance System. These files help administrators better understand and resolve the reported issue.

Requirements Traceability

F4 – Upload Supporting Documents

Priority

High

Preconditions

• The user must be registered in the system.
• The user must be logged into the system.
• The user must be on the complaint submission page.

Postconditions

• The uploaded file is successfully stored in the system.
• The file is linked to the corresponding complaint record.

Actors

Primary Actor: User

Flow of Events

1. Basic Flow

1. The user opens the complaint submission form.
2. The user selects the 'Upload Supporting File' option.
3. The system prompts the user to choose a file from their device.
4. The user selects a file.
5. The system validates the file type and size.
6. The system uploads the file to the server.
7. The system confirms successful upload.

2. Alternative Flow

• If the selected file type is not supported, the system displays an error message.
• If the file size exceeds the limit, the system asks the user to upload a smaller file.

3. Exceptions

• Network failure during file upload.
• Server error while saving the file.

3.3.5 Use Case #5

U5: View Complaint History

Author: Sereddy Amulya

Purpose: To allow a registered user to see a comprehensive list of all complaints they have submitted to the system in the past, including their current status and any administrator responses.

Requirements Traceability: F12 (View Complaint History), F11 (Track Complaint Status).

Priority: Medium. While essential for user transparency, it is secondary to the core functionality of submitting and resolving complaints.

Preconditions:

1. The user must be successfully registered in the system.

2. The user must be authenticated and logged into their account.

3. The user must have submitted at least one complaint previously for a history to exist.

Postconditions:

1. The system displays a chronological list of the user's past complaints.

2. The system remains in a state where the user can select a specific complaint to view further details or tracking information.

Actors: Registered User.

Extends: None.

Includes: UC-02 (User Login).

Flow of Events

1. Basic Flow

1. The user navigates to the "Complaint History" or "My Dashboard" section of the web interface.

2. The system retrieves all complaint records associated with the logged-in User's unique ID from the MySQL database.

3. The system displays the complaints in a list or table format, showing the Complaint ID, Title, Submission Date, and current Status (e.g., Pending, In Progress, Resolved).

4. The user views the summary of their past grievances.

2. Alternative Flow (No History)

1. At step 2 of the Basic Flow, if the system finds no complaints associated with the User's ID:

2. The system displays a message: "You have not submitted any complaints yet."

3. The system provides a link to the "Complaint Submission Form."

3. Exceptions

1. **Database Connection Failure**: If the system cannot reach the MySQL database, it displays an error message: "Unable to retrieve history at this time. Please try again later."

2. **Session Timeout**: If the user's session expires while viewing the history, the system redirects them to the Login page.

Notes/Issues

● Performance: The system should load the history within the 3-second performance requirement.

● Privacy: Ensure that a user can only see their own complaint history and cannot access records belonging to other User IDs.

3.3.6 Use Case #6

U6: Track Complaint Status

Author: Sreeja Sunkara

Purpose: The purpose of this use case is to allow users to view and track the status of complaints they have submitted through the Digital Complaint and Grievance System.

Requirements Traceability: F12 (View Complaint History), F11 (Track Complaint Status).

Priority: High

Preconditions:

1. . The user must be registered in the system.

2. The user must be logged into the system.

3. The user must have submitted at least one complaint.

Postconditions:

1. The system displays the current status of the complaint.

2. The user is able to view updates or responses related to the complaint.

Actors: User

Extends: None.

Flow of Events

1. Basic Flow

1. The user logs into the system.

2. The user navigates to the complaint tracking or complaint history page.

3. The system retrieves all complaints submitted by the user.

4. The system displays the list of complaints along with their current status.

5. The user selects a specific complaint.

6. The system displays detailed information including complaint status and administrator updates.

2. Alternative Flow (No History)

AF1 – Multiple Complaints

1. If the user has submitted multiple complaints, the system displays a list of all complaints.

2. The user selects one complaint to view its detailed status.

3. Exceptions

1 No Complaints Found: If the user has not submitted any complaints, the system displays a message indicating that no complaints are available.

2 System Error: If the system cannot retrieve complaint data due to a server error, the system displays an error message and asks the user to try again later.

Notes/Issues

● The system should update complaint status regularly to ensure accurate tracking.

● Status information should be clearly visible and easy to understand for the user

3.3.7 Use Case #7

U7 ADMIN LOGIN

Author: N.Nithin Reddy

Purpose: To allow the administrator to securely access the Digital Complaint & Grievance Management System in order to manage complaints, monitor user activities, and update complaint status.

Requirements Traceability:

- The system shall allow administrators to log into the system.
- The system shall authenticate administrator credentials before granting access.

- The system shall restrict admin functionalities to authorized administrators only.

Priority: High

Preconditions:
- The administrator must already have a valid admin account
- The admin login page must be accessible.

Postconditions:
- The administrator is successfully logged into the admin dashboard.
- The administrator can access administrative functions such as viewing complaints and updating complaint status.

Actors: Administrator

Extends: Invalid Admin Login

Flow of Events

1. Basic Flow
- The administrator opens the admin login page.
- The system displays the admin login form.
- The administrator enters username and password.
- The administrator clicks the login button.
- The system authenticates the administrator credentials.
- If the credentials are valid, the system grants access to the admin dashboard.

2. **Alternative Flow**
- The administrator may choose to reset the password if forgotten.

3. **Exceptions**
- Incorrect username or password entered.
- Unauthorized access attempt.
- System temporarily unavailable.

Includes (other use case IDs):
- Authenticate Admin Credentials

Notes / Issues:
- Additional security measures such as multi-factor authentication may be implemented for admin accounts.

3.3.8 Use Case #8

U8 – View All Complaints

AUTHOR: AMULYA
PURPOSE:
To allow the authorized user (admin or authority) to view all complaints submitted by citizens in the Digital Complaint and Grievance System so that they can monitor, review and manage them effectively.

REQUIREMENTS TRACEABILITY:

- The system should allow the admin to view all the submitted complaints.
- The system should display details such as complaint id, description, category, status and submission date.
- The system should retrieve the data of complaints from database.
- The system should also allow admit to review complaints.

PRIORITY:

High.

PRE-CONDITIONS:

- The admin must be logged into the system before trying to view complaints (U7-Admin login).
- Complaints reported must be stored in the database.

POST-CONDITIONS:

- All the complaints should be displayed to the admin.
- The admin can view details of a specific complaint using complaint-id
- Admin can review complaint information.

ACTORS:

Admin

EXTENDS:

U9-Filter Complaints No complaints available (if none)

FLOW OF EVENTS

1.BASIC FLOW:

- The admin logs into the system.
- Admin navigates to view complaints section.
- The system retrieves all the complaints from database.
- The system displays the list of all complaints with relevant details.
- Admin reviews complaints.

2.ALTERNATIVE FLOW:

- The admin logs into the system.
- Admin navigates to view complaints section.
- The system retrieves all the complaints from database.
- If no complaints available, it displays “NO COMPLAINTS AVAILABLE”.

3.EXCEPTIONS:

- The admin tries to view complaints.
- If the system fails to retrieve the complaints from the database, it is a database error.
- System displays “Error”

INCLUDES (OTHER USE CASE IDS):

U7-Admin Login U9-Filter Complaints(optional)

NOTES/ISSUES:

- Only authorized admins should be allowed to view all complaints.
- System should ensure security.
- If the number of complaints are large filtering complaints maybe be used for convenience.

3.3.9 Use Case #9

U9: FILTER COMPLAINTS

Author

Nandini Penmetsa

Purpose

The purpose of this use case is to allow the admin to filter complaints based on specific criteria such as status, date, category, or user so that the admin can easily find and manage complaints.

Requirements Traceability

- The system shall allow the admin to filter complaints based on complaint status (Pending, In Progress, Resolved).
- The system shall allow the admin to filter complaints based on the category or date of submission.
- The system shall display only the complaints that match the selected filter criteria.

Priority

High
(This feature is important because the admin needs it to manage large numbers of complaints efficiently.)

Preconditions

- Admin must be logged into the system.
- Complaints must already exist in the database.

Postconditions

- The system displays complaints that match the selected filter criteria.
- The admin is able to view the details of the filtered complaints.
- The admin can perform further actions on the filtered complaints (such as viewing or updating complaint status).

Actors

- Admin

Extends

View All Complaints
(Because filtering is usually done after viewing the complaint list.)

Flow of Events

1. Basic Flow

- Admin logs into the system.
- Admin navigates to the View All Complaints page.
- Admin selects filter options (for example: status, category, or date).
- Admin clicks the Filter/Search button.
- System retrieves complaints matching the selected criteria.
- System displays the filtered complaint list.

2. Alternative Flow

If no filter criteria are selected, the system displays all complaints without applying any filters.

3. Exceptions

- If no complaints match the selected filter criteria, the system displays a message indicating no results found.
- If a system or database error occurs, the system displays an error message and asks the admin to try again.
- If invalid filter criteria are entered, the system prompts the admin to enter valid information.

Includes (Other Use Case IDs)

View All Complaints

Notes / Issues

- Filtering should be fast even when the complaint database is large.
- The interface should allow multiple filters (status, category, date).

3.3.10 Use Case #10

U10 – UPDATE COMPLAINT STATUS

Author: Thanishq Reddy

Purpose:
To allow the administrator to update the status of complaints in the Digital Complaint & Grievance Management System so that users can track the progress of their submitted grievances.

Requirements Traceability:

- The system shall allow administrators to update the complaint status.
- The system shall store updated complaint status in the database.
- The system shall allow administrators to mark complaints as Pending, In Progress, or Resolved.
  Priority: High

Preconditions:

- The administrator must already have a valid admin account.
- The administrator must be logged into the system.
- Complaints must exist in the system database.

Postconditions:

- The complaint status is successfully updated.
- The updated complaint status is stored in the system database.
- Users can view the updated complaint status.
  Actors: Administrator
  Extends:
- Invalid Status Update
- Unauthorized Access
  Flow of Events

1.Basic Flow:

- The administrator logs into the system.
- The system displays the admin dashboard.
- The administrator navigates to the complaints management section.
- The system displays the list of complaints.
- The administrator selects a complaint.
- The system displays the complaint details.
- The administrator selects a new complaint status (Pending, In Progress, Resolved).
- The system updates the complaint status.

- The system confirms that the complaint status has been updated.

2.Alternative Flow

- The administrator may cancel the update process and return to the complaints list.

4. Exceptions

- Invalid complaint status selected.
- Complaint record not found.
- System temporarily unavailable.

Includes:

- U7 – Admin Login
- View Complaints

Notes / Issues:

- Only authorized administrators should be able to update complaint status.
- The system should maintain logs of complaint status updates for monitoring purposes.

4 Other Non-functional Requirements

4.1 Performance Requirements

- *The system shall respond to user requests within three seconds under normal operating conditions.*
- *The system shall support multiple users accessing the system simultaneously.*

4.2 Safety and Security Requirements

- *The system shall require authentication before allowing users to access system features.*
- *User data and complaint information shall be securely stored in the database.*
- *The system shall restrict administrative functions to authorized administrators only.*

4.3 Software Quality Attributes

4.3.1 Reliability

The system should maintain stable performance during regular usage without failures.

4.3.2 Usability

The system interface should be simple and easy to use for both users and administrators.

4.3.3 Maintainability

The system should be modular to allow future updates and improvements.

5 Other Requirements

The system must maintain accurate records of complaints and ensure that complaint information is stored securely.

The system must support multiple users submitting and tracking complaints simultaneously.

Appendix A – Data Dictionary

The data dictionary defines the key data elements used in the Digital Complaint and Grievance System. It helps maintain consistency and clarity in how data is stored and used throughout the system.

Data Element	Description	Type	Example
User_ID	Unique identifier assigned to each user	Integer	1001
User_Name	Name of the registered user	String	Indira Sneha
Email	Email address used for registration and login	String	user@email.com
Password	Encrypted password stored for authentication	String	********
Complaint_ID	Unique identifier assigned to each complaint	Integer	5001
Complaint_Title	Short title describing the complaint	String	Network Issue
Complaint_Description	Detailed explanation of the complaint	Text	Internet not working in hostel
Complaint_Status	Current status of the complaint	String	Pending / In Progress / Resolved
Submission_Date	Date the complaint was submitted	Date	10-03-2026
Admin_Response	Message or response provided by the administrator	Text	Issue will be resolved soon
Attachment_File	Optional file uploaded with complaint	File	screenshot.png

Appendix B - Group Log

This section records the meetings and work performed by the team during the preparation of the Software Requirements Specification.

Date	***Participants***	***Activity***	***Outcome***
09-02-2026	*Entire Team*	*Project-kickoff meeting*	*Discussed project topic and scope*
15-02-2026	*Documentation Team*	*Requirement discussion*	*Identified initial functional requirements*
25-02-2026	*Backend,Database Team*	*Database planning*	*Identified main entities such as User and Complaint*
05-03-2026	*Frontend Team*	*UI-planning discussion*	*Discussed user interface pages*
08-03-2026	*Entire Team*	*SRS-discussion meeting*	*Reviewed project requirements*
10-03-2026	*Entire Team*	*SRS-finalization meeting*	*Completed and prepared SRS document for submission*
